

Geography Course Handbook

Course Code: GEO-11 | Academic Year 2025–2026

Course Description

Physical and human geography covering landforms, climate, population, and sustainability.

Course Overview

This course explores the relationships between people and their environments, using maps, data, and case studies to understand spatial patterns and global challenges.

Learning Outcomes

By the end of this course, students will be able to:

- 1 Interpret maps, graphs, and geographic data to identify spatial patterns.
- 2 Explain the processes shaping landforms, climate, and ecosystems.
- 3 Analyze patterns of population, migration, and urbanization.
- 4 Evaluate the causes and impacts of resource use and environmental change.
- 5 Propose sustainable solutions to local and global geographic challenges.

Assessment

30% case studies, 25% tests, 20% fieldwork/project, 25% final exam.
