

Mathematics Course Handbook

Course Code: MATH-11 | Academic Year 2025–2026

Course Description

Grade 11 Mathematics covering algebra, functions, trigonometry, and an introduction to statistics.

Course Overview

This course builds on foundational arithmetic and pre-algebra to develop fluency with functions and quantitative reasoning. Students work through problem sets, group investigations, and a term project applying math to a real-world scenario.

Learning Outcomes

By the end of this course, students will be able to:

- 1 Solve linear, quadratic, and simple rational equations and interpret their solutions.
- 2 Analyze and graph linear, quadratic, exponential, and trigonometric functions.
- 3 Apply the properties of right and non-right triangles using trigonometric ratios and the sine/cosine laws.
- 4 Represent and summarize data using measures of central tendency and spread.
- 5 Model real-world situations with appropriate functions and justify the chosen model.

Assessment

40% term tests, 20% assignments, 15% project, 25% final exam.
