

Physics Course Handbook

Course Code: PHYS-11 | Academic Year 2025–2026

Course Description

Introductory Physics covering kinematics, forces, energy, and waves.

Course Overview

Students explore the fundamental principles governing motion and energy through experiments, problem-solving, and mathematical modeling of physical phenomena.

Learning Outcomes

By the end of this course, students will be able to:

- 1 Analyze motion in one and two dimensions using kinematic equations.
- 2 Apply Newton's laws to explain and predict the effect of forces on objects.
- 3 Use the principles of work, energy, and the conservation of energy to solve problems.
- 4 Describe the properties and behavior of mechanical and electromagnetic waves.
- 5 Design and carry out experiments, analyzing uncertainty in measured data.

Assessment

30% labs, 30% tests, 15% assignments, 25% final exam.
